

Mute Words

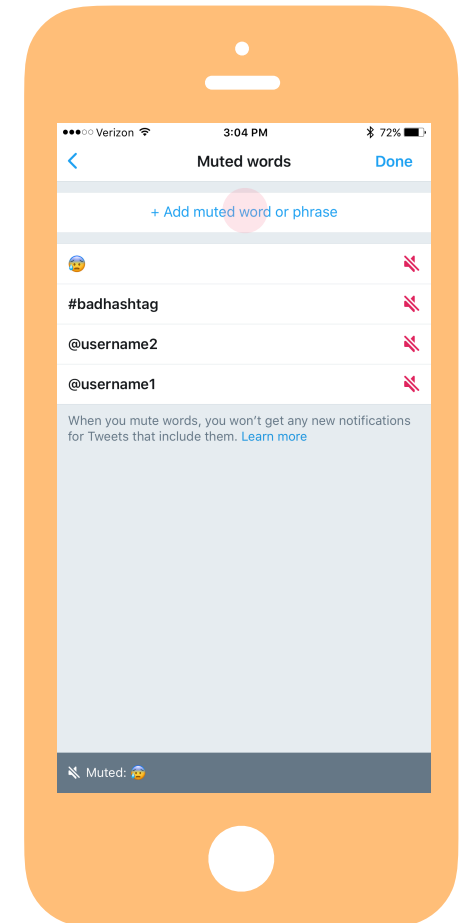

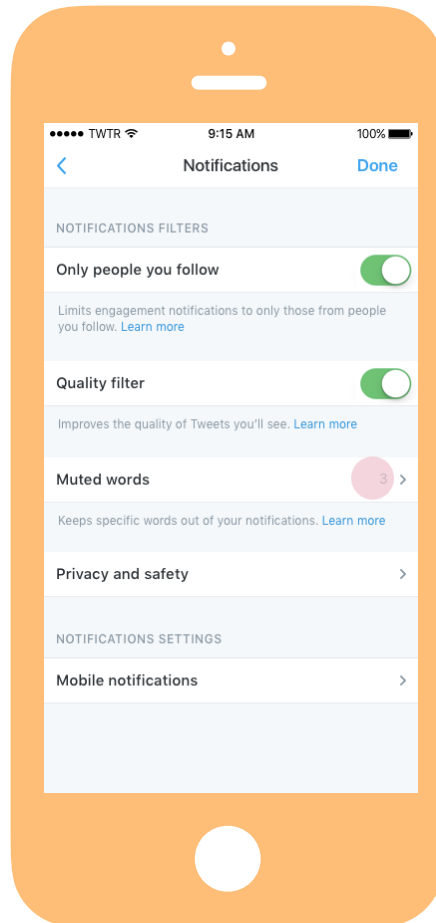

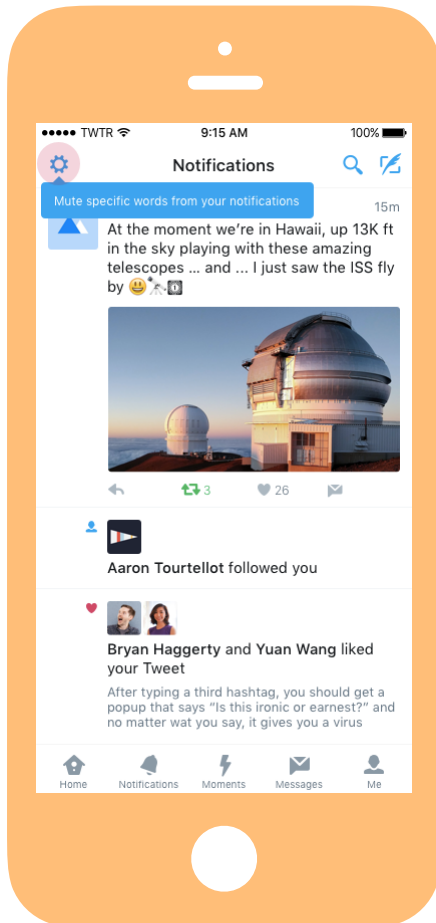

What is Mute Words?

With Mute Words, you now have the ability to mute specific words, phrases, usernames, emojis, or hashtags, so you will not see any new notifications for any Tweets that contain them.

1 To mute specific words, go to Notifications > Settings

2 Next, tap on Muted Words to add words or phrases

3 Add words to stop getting them in notifications

What's next? We've heard and seen that abuse is most acutely felt in notifications, so this iteration of Mute Words is built for notifications to help you combat that. We're also working on additional functionalities, so in the future you can mute keywords from other parts of your Twitter experience, such as your Home Timeline.
